ETHERNITY NETWORKS LIMITED

("Ethernity" or the "Company")

Ethernity Networks UEP-20 successful field trials

Ethernity Networks (AIM: ENET.L), a leading supplier of data processing offload solutions on programmable FPGA (field programmable gate array) hardware for accelerating telco/cloud networks, today updates on successful live field trials for its UEP-20 (universal edge processing) product equipped with wireless bonding technology.

A global OEM customer has conducted field trials for Ethernity's UEP-20 product with a US-based ISP (internet service provider). We are pleased to report that the unit passed the field trials, with bonding successfully performed on a variety of products from multiple vendors, indicating the ability of the solution's interoperability and flexibility.

The Company anticipates that this will lead to orders in excess of 1,000 units for its UEP-20 product, with deliveries commencing in Q4 2021.

Ethernity will be further exhibiting its wireless bonding technology and UEP products at WISPApalooza 2021, at kiosk K07 at the Paris Las Vegas, from 11 to 14 October 2021 to an audience of North American ISPs. WISPApalooza is a premier event of the Wireless Internet Service Provider Association, with over 2,000 attendees.

About Ethernity Networks

[Ethernity Networks](#) (AIM: ENET.L) provides innovative, comprehensive networking and security solutions on programmable hardware for accelerating telco/cloud networks. Ethernity's FPGA logic offers complete Carrier Ethernet Switch Router data plane processing and control software with a rich set of networking features, robust security, and a wide range of virtual function accelerations to optimize telecommunications networks. Ethernity's complete solutions quickly adapt to customers' changing needs, improving time-to-market and facilitating the deployment of 5G, edge computing, and NFV.
