

During the first half of 2022, Ethernity focused strongly on behind-the-scenes growth. We added R&D staff to support our existing contracts, and we made excellent progress toward completing various projects that will not only produce ongoing revenues, but will also open up new avenues for sales.

I'm pleased to report that the third quarter of the year has been a busy and productive time at Ethernity, as we began to see results from our period of consolidation! Between a very exciting follow-on contract for fiber-to-the-room deployments and a move to make our shares more easily tradable in the United States, plus very positive revenue from the first couple months of H2, Ethernity is on a roll.

And that doesn't even begin to mention the ongoing interest we are fielding for our patented link bonding technology. We'll be running a live demo of that at NetworkX in Amsterdam next week (as well as presenting much more), and we're expecting to generate even more leads as a result.

We at Ethernity are excited for what's to come, and we look forward to having you join us along the way.

As always, I welcome your feedback at briank@ethernitynet.com.

The Value of Fiber-to-the-Room
Fiber promises much faster overall internet speeds, but Wi-Fi can often be a bottleneck within the home or business. FTTR addresses this issue by bringing fiber not just to the edge of the building, but into each room... [Read More](#)

NEC Exec: Open RAN is Moving Quite Fast Compared to Prior Tech Shifts
by Monica Allevan, in Fierce Wireless
"It's probably one of the faster moving technologies that we've seen. Could it go faster? Yeah, absolutely. Network operators are providers of critical infrastructure. It takes a long time to implement a new technology and to bring in new vendors." While we all wish it could be implemented already, Ethernity is definitely ahead of the curve... [Read More](#)
